

## Choose a device

Generating electricity from renewable resources is very important to decrease the CO<sub>2</sub> emissions.

Choose a device (it can be among the list or not) and make researches on the Internet to find information on it.

## Create your slide show

Describe how your device work and where you can find it

Analyze:

- its efficiency (the output power in comparison with the input power),
- its reliability (can you all the time use this energy),
- its cost effectiveness (how expensive is it to make in comparison to the amount of electricity it produces?).
